Cuvée - like a bouquet of flowers

Strain: Muscaris, Hiberna, Johanner

Blue Label

Nose: rose flower, lychee, citrus

Mouth: fresh, mineral, balanced

Despite the dryness, a unique muscat sweetness is surprising.

Sugar: 7.8 g

HISTORY

OF VINEYARDS IN WESTERN POMERANIA

Forgotten tradition of vineyards in Szczecin – the past and future

The first mentions of the creation of vineyards in the area of Szczecin come from the 13th century, when the Cistercian Order planted vines on the Hills of today's Szczecin district - Gośćław.

agrotechnical conditions needed for viticulture

- hill - slope to the sun
- air humidity - impact of water reservoirs
- mineral substrate

After the dissolution of the order, viticulture and local wine production were continued by successive owners until the end of the 19th century.

Later - the laborious cultivation of wine was discontinued, because cheap imported mass-produced wines appeared on the market, as well as the cultivation of hops and the production of a cheap drink - beer until to 2016 ...

THE HISTORY OF THE ESTABLISHMENT OF THE RAJKOWO PALACE VINEYARD

The vineyard is located in Smolecin - a small suburban village on the outskirts of Szczecin. It is located on the hills of the so-called Wale Stobniańskie near the Lower Oder Valley located on the Oder River.

The first vine seedlings were brought here from certified plantations of seedlings from the Rhine and Moselle valleys. The same climate and soil conditions

Plantation was established in 2016

The vineyard has an area of 5
hectares and almost 18,000 seedlings of the following
varieties grow on it:

Solaris (matures the earliest)

Muscaris

Hibernal

Johanniter

spring May 2017

the vine grows very fast and requires a lot of manual care

Second year (march 2018) of seedling growth - vertical flower shoots will grow from side buds - shoot located to the side

From May, when the first leaves appear, to the harvest at the end of September and October, intensive vineyard care work is underway

Only natural fertilizers and natural plant protection products may be used. This is checked and verified in a certified laboratory.

How is it checked?

Plant samples are taken for the presence of prohibited chemicals.

unfortunately, most of the inflorescences will have to be cut off - all in order to get the right quality fruit for wine production

The ECO cultivation label gives you the confidence that you are consuming a product that is safe for your health. It will certainly be more expensive than those products that are mass-produced
